

# Creating a PDF Using PageMaker 6.5 (Mac)

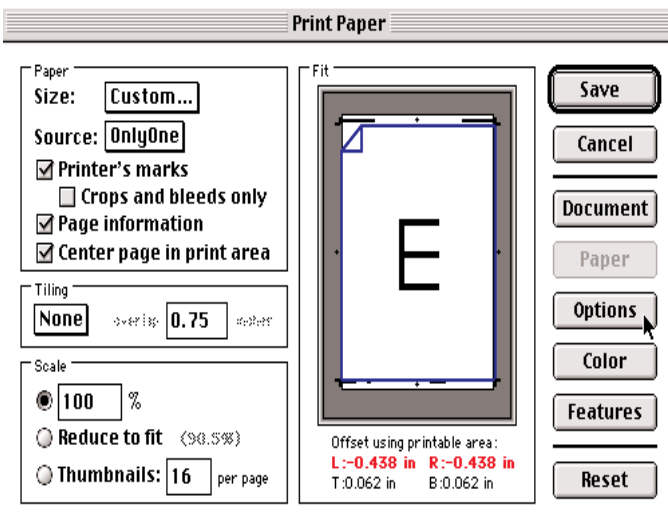

## Step 1:

- The first step in creating a PDF is choosing **Adobe PS** as your printer.
- Select **Chooser** from the **Apple** menu.
- Select **Adobe PS** as your printer in the upper left menu.
- Close out of Chooser.
- Next, **Open** your PageMaker document.

## Step 1:

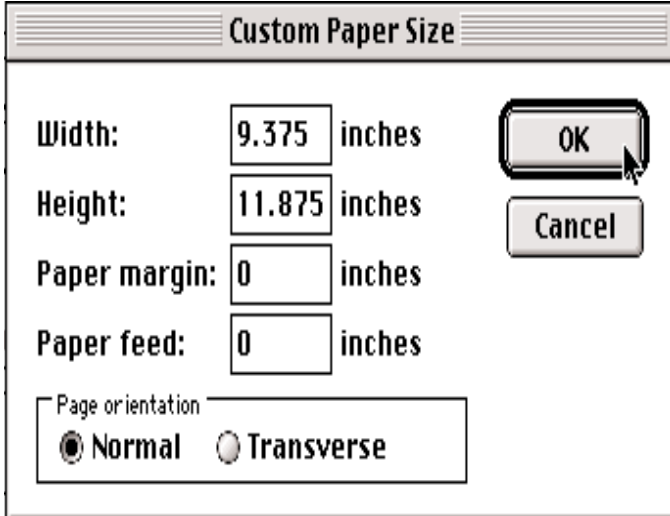

- Click the **File** menu and select **Print**.
- Create **Adobe PDF** should be displayed for the **Printer**
- Select **Acrobat Distiller** in the **PPD** menu.
- Check only the **Print blank pages** checkbox.
- Next, click the **Paper** tab at the right.

## Step 2:

- Select **Customer** for **Paper Size**.
- Go on to Step 3.

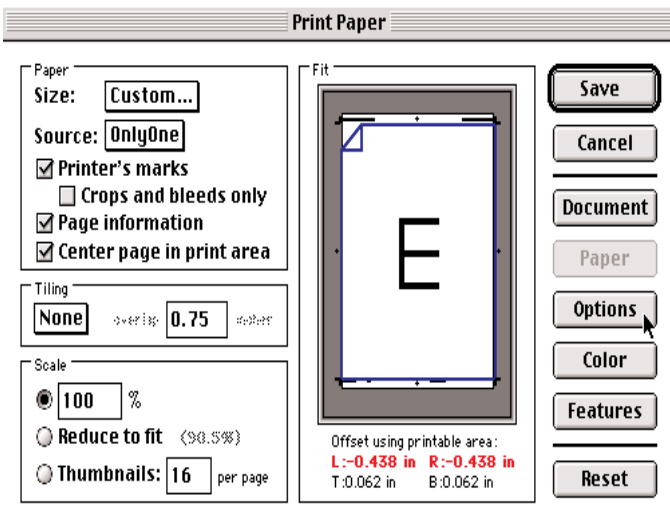

# Creating a PDF Using PageMaker 6.5 (Mac)

## Step 3:

-**ADD ONE INCH TO THE WIDTH AND HEIGHT OF YOUR DOCUMENT** and enter that total in for the width and height. (For example, if your document is 8.375X10.875, you would enter in 9.375X11.875. The extra page size is needed to keep an accurate bleed on the PDF.)

-**Next**, click the **OK** button.

## Step 4:

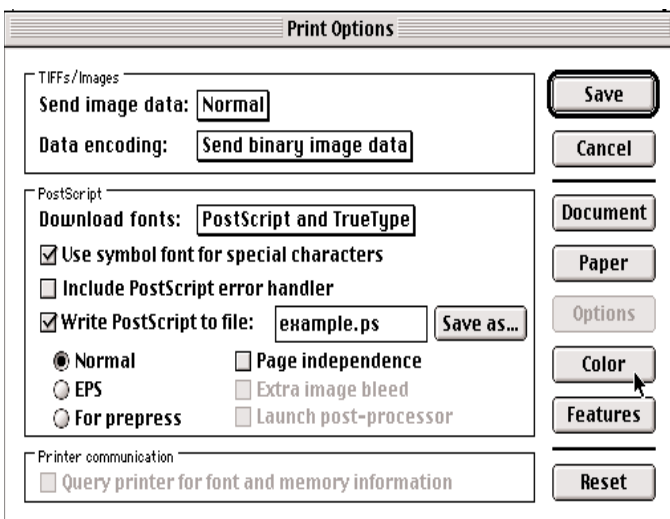

-You should have returned to the **Paper Tab**. The screen should look like the one to the left.

-Check the boxes next to **Printer's marks**, **Page information**, and **Center page in print area**.

-Set the **Tiling** to **None**.

-Leave the **Scale** at **100%**.

-**Next**, click the **Options** tab.

## Step 5:

-Change the **Send image data** to **Normal**.

-Leave **Data encoding** to **Send binary image data**.

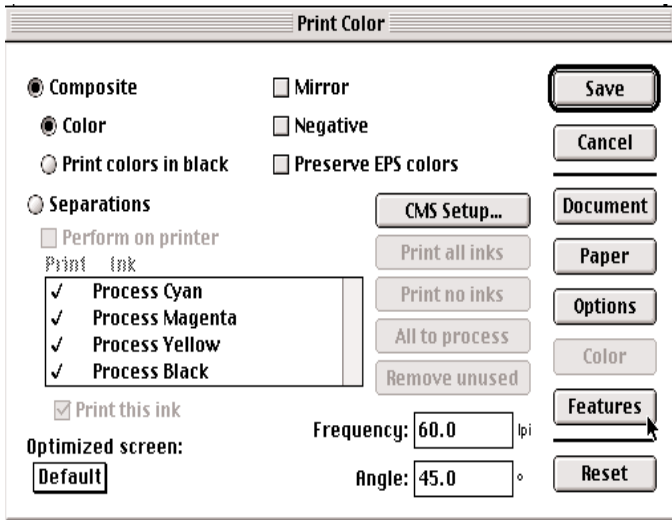

-Choose **PostScript and TrueType** in the **Download fonts** menu.

-Check the boxes next to **Use symbol font for special characters**.

-Check the box next to **Write PostScript to file** and give your .ps file a name.

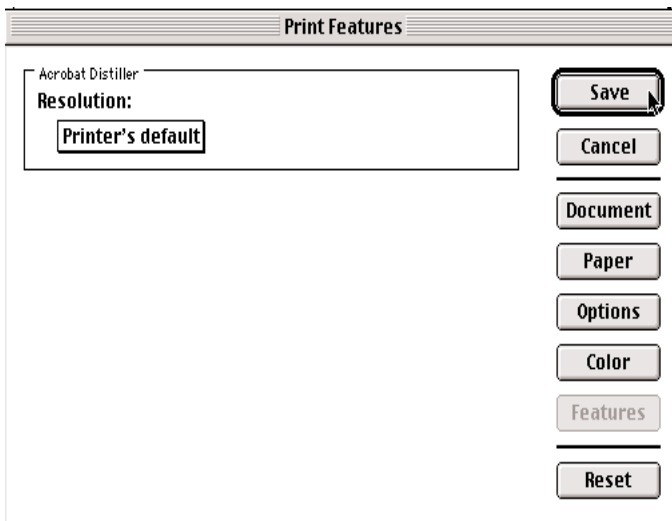

-**Next**, click the **Color** tab.

# Creating a PDF Using PageMaker 6.5 (Mac)

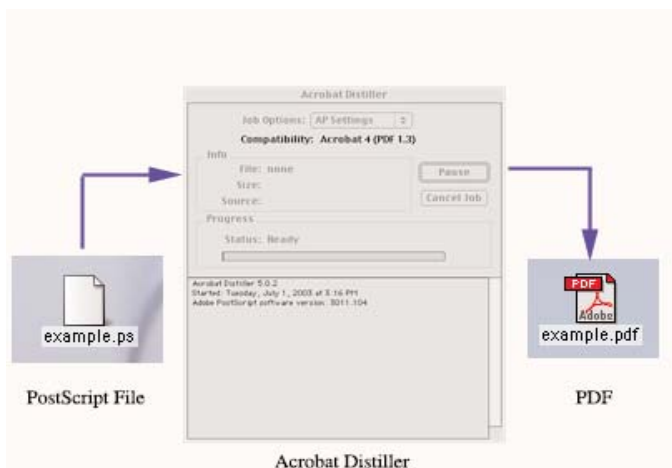

## Step 6:

- In the upper-left corner, choose **Color** if your job is to be printed in color, or **Print colors in black** if your job is in only black.
- Leave all checkboxes *unchecked*.
- Click the **CMS Setup** button. Be sure **Color Management** is set at **Off**. Click ok to return to the color tab.
- Set the **Frequency** to **60.0** and the **Angle** to **45.0**.
- Next**, click the **Features** tab.

## Step 6:

- Be sure the **Resolution** is set at **Printer's default**.
- Next**, click the **Save** button to save your PostScript (.ps) file. *(You are saving a PostScript file, not a PDF. You will run the .ps (postscript) file through Distiller to create the PDF file.)*

## Step 6:

- You should now have a PostScript file saved in the location you selected in step 3.
- Open **Acrobat Distiller**. Select the **Action Job Options** in the **Job Options** drop-down box. *(You must use Action Printing's job options in Distiller. To get our job options, go to [www.actionprinting.com/pdf.html](http://www.actionprinting.com/pdf.html), or email [preflight@actionprinting.com](mailto:preflight@actionprinting.com).)*
- Drag** your PostScript file into Acrobat Distiller.
- Distiller will then create your PDF.**
